

This release contains two features confirmed in the Phase 4 2022 development plan. The goal of the release was to enhance the usability of the GPC search, and to allow users to customise their Excel file.

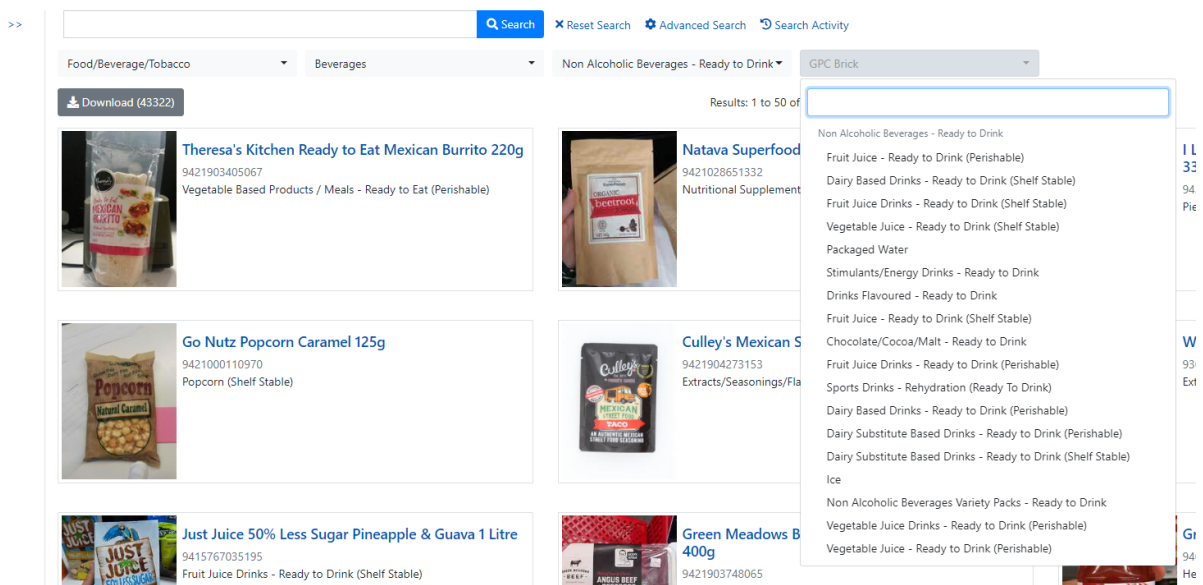

## New Features

### Changes to the GPC Search

The aim of this feature is to make the relationship between GPC codes easier to understand for the user. Each level of the GPC hierarchy is split out in order – Segment, Family, Class, and Brick. Each level is nested within the one that precedes it. Once selections have been made, click Search to trigger the search.

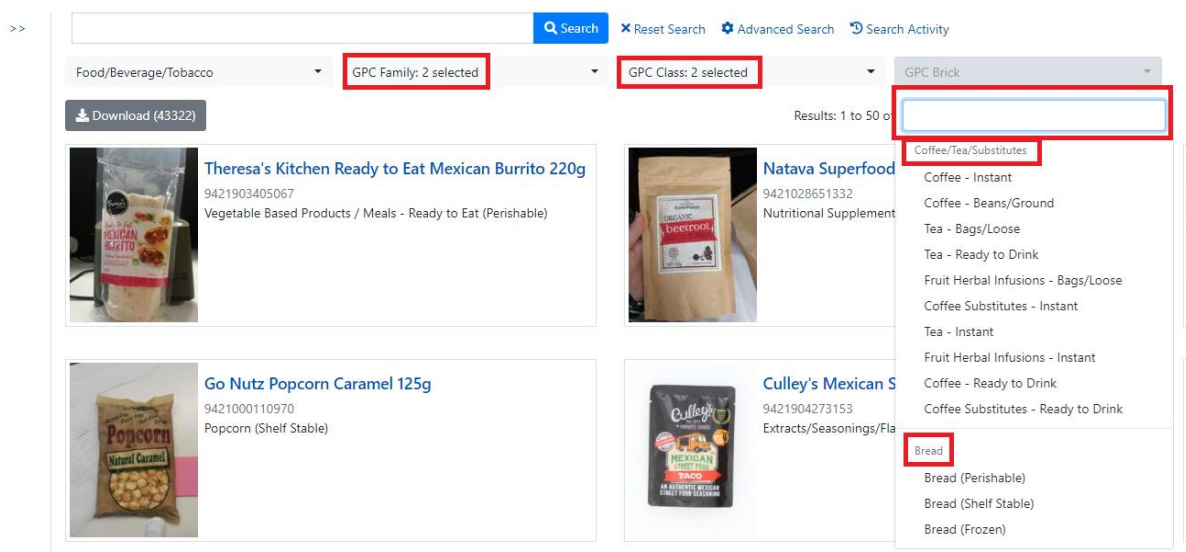

To see which codes are nested within each level, select the category at each level, starting with the Segment on the left-most side. When the Food/Beverage/Tobacco Segment is selected, the GPC Family drop-down menu will only show GPC Families nested within Food/Beverage/Tobacco. If the Beverages GPC Family is selected, the GPC Class drop-down menu will only show the GPC Classes nested within Beverages, and so on.

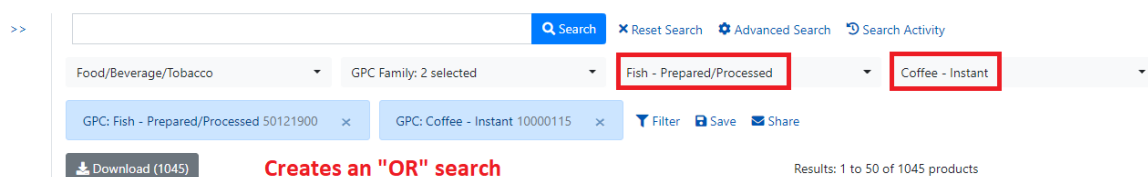

Multiple Segments, Families, Classes, and Bricks can be selected. Selected categories will have a tick beside them. To deselect a category, simply click on it again. When multiple categories are selected, the next level of the hierarchy will display the categories nested within each selected, with clear delineation between categories.

Categories can be searched for by typing a search term into the search bar within each drop-down menu.

If no GPC Segment is selected, all existing categories will be shown within each level of the GPC Hierarchy.

If the user knows exactly which categories they'd like to search, they can select those categories at whichever level is appropriate. Selecting categories at multiple levels creates an "OR" search. For example, if the user selects Beverages and Seafood at the Family level, Fish – Prepared/Processed at the Class level, and Coffee – Instant at the Brick level, the resulting search will be for Fish – Prepared/Processed OR Coffee – Instant.

## Changes to the Excel file download

Users will now be able to select which columns of data appear in their Excel file download. Column selections can be saved as a nameable template for quick selection later. Templates can be loaded and deleted as necessary.

### Download Data ×

Preset:

Include all GPC data  Include all Ingredients data  
GPC data: 3 selected ▼ Ingredients data: (none) ▼

Include all Alcohol data  Include all Other data  
Alcohol data: (none) ▼ Other data: (none) ▼

Include all Nutrition Information Panel data  
Nutritional data: (none) ▼

Standardise Per 100 g/ml nutrient values ?

Include all past versions

Past version data will be saved in a second, separate tab

Some columns always appear in the download. These are GTIN, Description, Brand, Sub Brand, Net Content Quantity, Net Content Value, Net Content Value, Net Content UOM, Verification Date, Last Seen in In Market Date, Last Seen in Market Date Source, GPC Family, GPC Class, and GPC Brick. The GPC columns are selected by default but can be deselected at the time of download.

Columns of data are sorted into groups such as Ingredients data, Alcohol data, etc. To select/deselect a group of data, tick/untick the box beside the name of the data

group. To select/deselect individual columns of data, select them from the group drop-down menu. Selecting individual columns of data deselects the group as a whole. The number of columns selected within a group is specified. At this time, Nutritional Information columns can only be selected or deselected as a whole group.

The screenshot shows a 'Download Data' dialog box with the following elements:

- Preset:** A text box containing 'Template 1' is highlighted with a red box. To its right are 'Load', 'Save', and 'Delete' buttons.
- Include all GPC data:** An unchecked checkbox. Below it, a dropdown menu shows 'GPC data: 3 selected'.
- Include all Ingredients data:** A checked checkbox is highlighted with a red box. Below it, a dropdown menu shows 'Ingredients data: 3 selected'.
- Include all Alcohol data:** An unchecked checkbox. Below it, a dropdown menu shows 'Alcohol data: (none)'.
- Include all Other data:** An unchecked checkbox. Below it, a dropdown menu shows 'Health Star Rating'.
- Include all Nutrition Information:** A checked checkbox. Below it, a dropdown menu shows 'Nutritional data: 41 selected'. This dropdown is open, showing a list of options: 'Allergens / Warnings', 'Origins', 'Endorsements', 'Claims', 'Warnings', and 'Health Star Rating'. The 'Health Star Rating' option is checked and highlighted with a red box.
- Standardise Per 100 g/ml nutrie**: An unchecked checkbox.
- Include all past versions:** An unchecked checkbox. Below it, text reads 'Past version data will be saved in a'.
- Buttons:** 'Close' and 'Download' buttons are at the bottom right.

To save the options you have selected as a template, name the template in the "Preset:" box and click Save. To select a template, remove any text from the "Preset:" box and select the template from the drop-down menu, then click Load. To delete a template, select it from the drop-down menu and click Delete.
